

Potential improvements

Task 1. Natural Language Processing. Named entity recognition

I have the error of absent table `lexeme_norm`, tried to fix it by installing needed packages, but my terminal shows that the requirement is already satisfied. Didn't find the correct solution yet, need more time for this improvement.

Task 2. Computer vision. Sentinel-2 image matching

Potential improvements involve:

- 1) Changing the ORB algorithm approach to ML approach (CNN or siamese)
- 2) Download the dataset from kaggle and try the functions on it (the dataset from kaggle is 35gb, i couldn't load it on my computer because i have got not enough space for it now).
